

ACKNOWLEDGEMENT FORM

This is to acknowledge that I have received a copy of the City of Thibodaux permit department commercial permit information package for the proposed or planned construction to be performed at the site listed below. I understand that it is my responsibility to provide this information to the individual, owner or contractor that will obtain a permit for the work to be performed at this location. I further understand that the person who obtains the permit shall be responsible to ensure that the construction performed complies with all applicable codes.

Should another copy of the information provided be requested after initial receipt, a duplicate copy fee of \$.50 per sheet shall be payable prior to receipt of this information.

Please note that this information is also available on the City of Thibodaux's website located at www.ci.thibodaux.la.us. You need to select Public Works Department in white drop down box; then you need to click on Building and Permits section, scroll down until you locate file named Commercial Permit Information Package*

Commercial Permit Issuance Requirements

Prior to permit issuance the following needs to be submitted for plan review:

- 1) Plan review letter from State Fire Marshal's office
- 2) Two (2) complete sets of plans with State Fire Marshal review stamp consisting of foundation plans, a roof and floor plan including elevation, stairs and landing detail and other details according to plan submittal requirements attached
- 3) Two (2) plot plans showing dimensions and location of structure with all setbacks, servitudes and driveways
- 4) Two (2) plumbing layouts done in red ink to be submitted by licensed plumber **separate from complete plans; along with fee calculation sheet (copy attached)**
- 5) Two (2) electrical layouts in detail showing fixtures and service to be submitted by licensed electrician **separate from complete plans; along with fee calculation sheet (copy attached)**
- 6) Two (2) gas layouts (if applicable) done in red ink to be submitted by licensed plumber **separate from complete plans; along with fee calculation sheet (copy attached)**
- 7) Two (2) landscaping layouts submitted **separate from complete plans**
- 8) Two (2) mechanical layouts to be submitted **separate from complete plans**

One plan will be kept on file in the Inspector's Office and one plan will be reviewed and returned to the respective contractor and **kept on the job at all times** for the inspection

OTHER REQUIREMENTS:

- 1) **Permit Application Form must be completed (copy attached)**
- 2) **Proof of bulk disposal container on job site** for disposal of all debris generated by the construction or demolition of a structure. The contractor or owner shall have the option of hauling the debris to a state approved landfill or disposal facility. **The contractor or owner shall provide confirmation of an account or agreement existing with the aforesaid landfill before a permit will be issued.**
- 3) **Proof of toilet facilities for workmen on job site** must be provided before a permit will be issued.
- 4) **ALL BUILDINGS shall floor grade level twelve (12) inches above the nearest downstream manhole cover or the surface of the street.**
- 5) **Compliance with City of Thibodaux sign regulations**
- 6) **Notice to contractors:** Please be advised that according to the City of Thibodaux's Code of Ordinances Section 13-1. "Prohibition against excessive noise and time limitations on certain noise producing activities" there is a time limitation on construction and demolition and **it is unlawful for any person to operate any equipment used in construction work within a residential area between the hours of 9:00 P.M. and 7:00 A.M. the following day.**

7) Storm Water Discharges – Construction Activities

The contractor/owner/operator shall certify all state requirements have been met by signing a certification statement as part of the building permit application.

1. All operators of construction sites shall use best management practices to control and reduce the discharge, to the City of Thibodaux, MS4, and to waters of the United States, of sediment, silt, earth, soil and other material associated with the clearing, grading, excavation, and other construction activities to the maximum extent practicable. Such best management practices may include, but not be limited to, the following measures:

- (a) Ensuring that existing vegetation is preserved where feasible and that disturbed portions of the site are stabilized as soon as practicable in portions of the site where construction activities have temporarily or permanently ceased. Stabilization measures may include: temporary seeding, permanent seeding, mulching, geotextiles, sod stabilization, vegetative buffer strips, protection of trees, preservation of mature vegetation and other appropriate measures;
- (b) Use of structural practices to divert flows from exposed soils, store flows, or otherwise limit runoff and the discharge of pollutants from the site to the extent feasible;
- (c) Minimization of the tracking of sediments off-site by vehicles, the generation of dust, and the escape of other windblown waste from the site;
- (d) Prevention of the discharge of building materials, including cement, lime, concrete and mortar to the City, MS4 or waters of the United States;
- (e) Providing general good housekeeping measures to prevent and contain spills of paints, solvents, fuels, septic waste and other hazardous chemicals and pollutants associated with construction, and to assure proper clean and disposal of any such spills in compliance with state, federal and local requirements;
- (f) Implementation of proper waste disposal and waste management techniques, including covering waste materials and minimizing ground contact with hazardous chemicals and trash;
- (g) Timely maintenance of vegetation, erosion and sediment control measures and other best management practices in good and effective operating condition; and
- (h) Installation of structural measures during the construction process to control pollutants in storm water discharges that will occur after construction operations have been completed. Structural measures should be placed on upland soils to the degree attainable. Such installed structural measures may include, but not be limited to the following: storm water detention structures (including wet ponds); flow attenuation by use of open vegetative swales and natural depressions; other velocity dissipation devices, infiltration of runoff on site; and sequential systems which combine several practices. Operators of construction sites are only responsible for the installation and maintenance of storm water management measures prior to final stabilization of the site and are not responsible for maintenance after storm water discharges associated with construction activity have terminated.

2. Personnel (provided by the operator of the construction site) shall inspect disturbed areas of any construction site (meeting criteria of current NPDES permit) that have not been finally stabilized, areas used for storage of materials that are exposed to precipitation, structural control measures

and locations where vehicles enter or exit the site in accordance with the current NPDES permit. All erosion and sediment control measures and other identified best management practices shall be observed in order to ensure that they are operating correctly and are effective in preventing significant impacts to receiving waters, the City and the MS4. Based on the results of the inspections, best management practices shall be revised as appropriate and as soon as is practicable.

3. The city may require any plans and specifications that are prepared for the construction of site improvement to illustrate and describe the best management practices required by subsection (1) (a) above that will be implemented at the construction site. The city may deny approval of any building permit, site development plan, or any other city approval necessary to commence or continue construction, or to assume occupancy, on the grounds that the management practices described in the plans or observed upon the site inspection by the city are determined not to control and reduce the discharge of sediment, silt, earth, soil and other materials associated with clearing, grading, excavation, and other construction activities to the maximum extent practicable.
4. Any owner of a site of construction activity, whether or not he/she is an operator, is jointly and severally responsible for compliance with the requirements in this section.
5. Any contractor or subcontractor on a site of construction activity, who is not an owner or operator, but who is responsible under his/her contract or subcontract for implementing best management practices control measure, is jointly and severally responsible for any willful or negligent failure on his/her part to adequately implement that control measure if such failure causes or contributes to causing the city to violate a water quality standard, the city's NPDES permit, or any state-issued discharge permit for discharges from its MS4.
6. Based on the results of the inspections required by subsection (2), the site description and/or the pollution prevention measures shall be revised as appropriate, but in no case later than one (1) calendar day following the inspection. Such modifications shall provide for the timely implementation of any changes to the SWPPP within one (1) calendar day following the inspection.
7. Upon final stabilization of the construction site, the owner of the duly authorized representative thereof shall submit written certification to the city that the site has been finally stabilized. The city may withhold an occupancy or use permit for any premises constructed on the site until certification of final stabilization has been filed and the city has determined, following any appropriate inspection, that final stabilization has, in fact, occurred and that any required permanent structural controls have been completed.
8. Construction activity, including clearing, grading and excavation activities, that result in the disturbance of one (1) or more acres of total land area shall comply with the requirements of this chapter. This also applies to building construction (including commercial and residential) on lots less than (1) acre.

(Ord. 2368, 12-18-07)

**All fees must be paid by check or money order prior to permit issuance.
Any work performed without permit issuance is subject to double fees.**

Inspection Requirements

Building inspection shall be performed in the foundation, framing and completion stages

Electrical inspection shall be performed in the foundation, rough-in and completion stages

Plumbing inspection shall be performed in the foundation, rough-in and completion stages

Gas inspection shall be performed in the rough-in and completion stages

Mechanical inspection shall be performed in the rough-in and completion stages

Any additional inspections that may be required

Phone number to call for Building, Electrical & Plumbing Inspections: 985-446-7208

Phone number to call for Gas Inspections: 985-446-7216

Request(s) for inspection must be made by the respective building contractor, electrician and plumber performing the work at the job site. **Contractors have to allow the inspection department up to forty-eight (48) hours to perform inspections from the time the inspection request is received.**

Permit Cards

No inspections shall be performed without the permit being displayed on the job site.

The permit holder shall post the permit on the job site where they are visible from the road. The permit shall be maintained by the permit holder until the final inspection has been made and approved.

Re-inspection fees may be charged for any additional inspections required after any of the initial free inspections referenced above.

Certificate of Occupancy

A certificate of occupancy will be issued upon completion of all inspections and the payment of all cost associated with the inspections have been paid in full. **No one shall be allowed to furnish or move in until certificate of occupancy has been issued.**

CITY OF THIBODAUX
LICENSING REQUIREMENTS - Electricians

Electrical Licensing Requirements

All electrical work to be performed within the City limits shall be performed by a City licensed electrician. In order to obtain a City electrical license, contractor shall be required to furnish the Inspection Department with a copy of their State electrical license. If contractor is not licensed state-wide, they have the option to take an electrical examination administered quarterly by the Inspection Department. Electrical examinations are typically scheduled in the months of January, April, July and October on the 1ST Wednesday of the month.

In addition, electrical contractor shall be required to furnish the Inspection Department with a \$2,000.00 contractor's or performance bond as required by City ordinance.

These items may be furnished to the Inspection Department by either fax, mail or at office.

Fax Number: **(985) 446-7272**
Physical Address: **1219 Henry S. Thibodaux Street, Thibodaux, LA**
Mailing Address: **City of Thibodaux, Inspection Dept., P. O. Box 5418, Thibodaux, LA**
 70302

Once the Inspection Department is in receipt of these items, a release form shall be faxed to the "Tax and License Department." Contractor should contact Tax & License Department at (985) 446-7221 for further information regarding obtaining a City electrical license.

CITY OF THIBODAUX

GAS INSPECTION INFORMATION

Plan Review

The customer or plumber is required to submit two sets of plans showing the proposed location of new gas piping drawn in red. The size of the pipe, location of isolation valves and the number of fixtures to be served with gas must also be marked on the plans. These plans must be accompanied with a Fixtures Sheet which includes the plumbers name, mailing address, license number, owner's name, address and date of submittal. A list of fixtures associated with natural gas and BTU demand must also be provided at the same time. Both sets are reviewed for compliance with all codes and City ordinances, changes are noted on the plans, stamped, signed and dated. One set remains in the office of the Gas Superintendent and the other returned to the customer or plumber who submitted the plans to follow during pipe installation.

INSPECTIONS REQUIRED

Gas Open Wall Inspection

After the gas piping is installed according to the plans approved and piping ready for inspection, the plumber must contact the Gas and Water Division of Public Works at 446-7216 to request a gas open wall inspection. The inspection will be conducted within two working days of the request. The plumber will be contacted to inform them of the results of the inspection as well as to inform them of any violations discovered.

Gas Pipe Pressure Test

After passing the gas open wall inspection, the gas piping must be tested to assure that there are no leaks. The test will be a minimum of 16 oz. and hold for 15 minutes with no loss of pressure. Test pressure shall be measured with a manometer or with a pressure-measuring device designed and calibrated to read, record or indicate a pressure loss caused by leakage during the pressure test period. The source of pressure shall be isolated before the pressure tests are made. Mechanical gauges used to measure test pressures shall have a range such that the highest end of the scale is not greater than five times the test pressure. The plumber must contact the Gas and water Division of Public Works at 446-7216 to request a gas pressure test for customer piping. The inspection will be conducted within two working days of the request. The plumber will be contacted to inform them of the results of the test.

Gas Final Inspection

After passing inspections for both the gas open wall and gas pipe pressure test and all related costs have been paid, the Gas and Water Division of Public Works will install the gas meter and gas regulator to serve the structure. The customer's plumber must then connect the customer's pipe to the outlet side of the gas meter and install a test tee with 1/4" outlet and plug on the downstream side of the gas meter. The customer's plumber must then connect and test all gas fixtures for leaks and repair before calling the Gas and Water Division to request a gas final inspection. The inspection will be conducted within two working days of the request if entry is possible.

NOTE: All work done on gas piping in the City of Thibodaux must be done by a licensed plumber, inspected and documented before gas service will be activated.
